OBJECTIVE

Computer science undergraduate building production AI applications, including an LLM healthcare app presented at Google DevFest and a multi-provider AI API server. Seeking Summer 2027 software engineering internships in AI and accelerated computing.

EDUCATION

Bachelor of Science in Computer Science, University of South Florida Expected Dec 2027

Relevant Coursework: Program Design, Discrete Structures, Computer Organization, Linear Systems.

Certifications: C++ Programming Fundamentals, Microsoft; Google AI Essentials, Google.

SKILLS

Languages	Python, C, C++, C#, JavaScript, TypeScript, HTML/CSS
AI / ML	LLM integration (OpenAI, Anthropic, Google, Llama), prompt engineering & evaluation, AI guardrails & JSON-schema validation, vector databases
Backend	FastAPI, REST API design, async & streaming request handling, rate limiting, error handling & logging, Docker, React Native
Tools & Systems	Git, Linux/CLI, Azure/Entra ID, Windows Server, Active Directory, API deployment

EXPERIENCE

IT Intern Jul 2026 - Present
WS Development Boston, MA

- Manage user accounts, group policies, and access control across Windows Server, on-premises Active Directory, and Azure/Entra ID hybrid-identity environments serving 100+ retail and mixed-use properties and 400+ companies.
- Harden systems and remediate vulnerabilities surfaced by NinjaOne across corporate and property-site infrastructure, and conduct access reviews as part of security operations.
- Troubleshoot server, network, and authentication issues across distributed site networks, supporting a queue of ~200 tickets per week, and maintain infrastructure documentation.

Mentorship Program Aug 2025 - Nov 2025
Google Developer Group (GDG) Tampa Tampa, FL

- One of 20 students selected for GDG Tampa's mentorship program in AI/ML, cybersecurity, and CS career development; built and deployed AI projects in Python and C through mentor-led workshops and agile sprints.

PROJECTS

Ad+ — E-Commerce Advertising Platform. Created a browser-based ad-prospecting dashboard in vanilla JavaScript with a drag-and-drop kanban prospect pipeline, weekly trending-product tracker, and automated outreach and offer-letter generation. Runs entirely offline from a single HTML file with localStorage persistence.

AI Doctor — Cross-Platform AI Healthcare App. Built an LLM-powered mobile healthcare app (React Native, FastAPI, Llama 3.3) providing symptom assessment, emergency detection, and provider suggestions, with a Dockerized backend and layered safety controls (guardrails, JSON-schema validation). Presented the architecture at Google DevFest to an audience of 200+ developers and industry mentors.

AI-Server — Multi-Provider LLM API Server. Developed an LLM inference gateway in Python and FastAPI that unifies OpenAI, Anthropic, and Google providers behind one REST interface, with async request handling, token streaming, Pydantic validation, per-client rate limiting, and structured error handling.

Email Database. Wrote an in-memory user-record database in C using pointers, manual memory management, and custom data structures.
