SUMMARY

Computer science undergraduate at the University of South Florida, graduating May 2028 with two terms of school remaining after Summer 2027. Builds backend systems in Python and TypeScript: relational schema and access-control design, third-party API integration under quota, and low-level work in C. Seeking a Summer 2027 SDE internship.

EDUCATION

University of South Florida, B.S. Computer Science

Tampa, FL | Expected May 2028

Coursework: Program Design, Discrete Structures, Computer Organization, Linear Systems

Certifications: C++ Programming Fundamentals (Microsoft), Google AI Essentials (Google)

SKILLS

Languages: Python, C, C++, SQL, TypeScript, JavaScript, C#, HTML/CSS

Backend and Systems: PostgreSQL schema and index design, row-level security, REST API design, object-oriented design, FastAPI, Flask, async request handling, serverless functions, caching and quota control, OAuth 2.0, Docker, GitHub Actions

AI: LLM integration (Llama 3.3 via OpenRouter), retrieval augmented generation with Chroma, prompt engineering, JSON schema enforcement and repair, model output guardrails, transformer model serving (DistilBERT)

Tools and Systems: Git, Linux and CLI, Vite, React, React Native, Microsoft Graph API, Azure and Entra ID, Windows Server, Active Directory

PROJECTS

Offr+, Recruiting Platform for Finance Students

React, TypeScript, Supabase, PostgreSQL

- Co-founded the project and wrote the codebase: 11 pages, 13 Postgres tables, and 3 serverless edge functions. Isolated tenants with 39 row-level security policies so no session can reach another user's data.
- Kept OAuth refresh tokens and API secrets server side in edge functions, integrated Microsoft Graph to sync calendar events and provision Teams meetings, and held a quota-limited job API under 1,000 calls per month using a shared cache keyed by normalized query.
- Built resume upload with automatic text extraction from PDF and Word files into per-user private storage buckets.

AI Doctor, Cross-Platform Healthcare App

Python, FastAPI, React Native, Llama 3.3, Chroma, Docker

- Owned the Python backend and the retrieval augmented generation pipeline on a four-person GDG Tampa mentorship team, roughly 3,900 lines or 45 percent of the codebase, under weekly mentor code review.
- Exposed triage, advice, and referral endpoints over FastAPI with JSON-only model output, repair and retry on malformed responses, and red-flag emergency detection, grounding advice in medical context retrieved from a Chroma vector store.
- Presented the system architecture at Google DevFest to 200+ developers and industry mentors.

AI-Server, Model Inference REST API

Python, Flask, Docker, GitHub Actions

- Built a REST API server that serves a DistilBERT sentiment model behind API key authentication, with health, predict, and model-listing endpoints, environment-based model swapping, Docker and docker-compose packaging, and a GitHub Actions workflow.

Email Database

C

- Implemented a single-file SQLite-style database in C with a command REPL supporting insert and select over user records, using manual memory management and pointer-based storage.

EXPERIENCE

IT Intern, WS Development

Boston, MA | Jul 2026 to Aug 2026

- Administer 511 user identities across Windows Server, on-premises Active Directory, and Azure/Entra ID hybrid environments spanning 100+ retail and mixed-use properties and 400+ tenant companies.
- Remediated 193 NinjaOne-flagged vulnerabilities across corporate and property-site infrastructure in 6 weeks while running recurring access reviews.
- Resolve server, network, and authentication issues from a queue of roughly 200 weekly tickets while maintaining infrastructure documentation.

Mentorship Program, Google Developer Group Tampa

Tampa, FL | Aug 2025 to Nov 2025

- Selected as 1 of 20 students for GDG Tampa's AI/ML and cybersecurity mentorship, building AI Doctor in Python under weekly mentor code review.
