Computer science undergraduate building production AI and full-stack applications, including an LLM healthcare app presented at Google DevFest and a multi-tenant recruiting platform. Seeking Summer 2027 software engineering internships in AI and accelerated computing.

EDUCATION

Bachelor of Science in Computer Science, University of South Florida Expected Dec 2027

Relevant Coursework: Program Design, Discrete Structures, Computer Organization, Linear Systems.

Certifications: C++ Programming Fundamentals, Microsoft.

SKILLS

Languages	Python, C, C++, C#, TypeScript, JavaScript, SQL, HTML/CSS
AI / ML	LLM integration (OpenAI, Anthropic, Google, Llama), prompt engineering & evaluation, AI guardrails & JSON-schema validation
Backend	React, FastAPI, Supabase/PostgreSQL, REST API design, serverless functions, database design, async & streaming, rate limiting, Docker, React Native
Tools & Systems	Git, Vite, Linux/CLI, OAuth 2.0, row-level security, Microsoft Graph API, Azure/Entra ID, Windows Server, Active Directory

EXPERIENCE

IT Intern Jul 2026 - Present
WS Development Boston, MA

- Administer 511 user identities across Windows Server, on-premises Active Directory, and Azure/Entra ID hybrid environments for 100+ retail and mixed-use properties and 400+ tenant companies, covering provisioning, group policy, and access control.
- Closed 193 NinjaOne-flagged vulnerabilities across corporate and property-site infrastructure in 6 weeks, and run recurring access reviews.
- Resolve server, network, and authentication issues across distributed site networks from a queue of ~200 weekly tickets, and maintain infrastructure documentation.

Mentorship Program Aug 2025 - Nov 2025
Google Developer Group (GDG) Tampa Tampa, FL

- One of 20 students selected for GDG Tampa's AI/ML and cybersecurity mentorship; built and deployed AI Doctor Chatbot in Python under mentor code review.

PROJECTS

Offr+: Recruiting Platform for Finance Students. Co-founded and built a multi-tenant recruiting platform for finance students in React, TypeScript, and Supabase, spanning 11 pages, 13 Postgres tables, and 3 serverless edge functions. Tenant data is isolated by 39 row-level security policies, with OAuth tokens refreshed and rotated server-side. A Microsoft Graph integration syncs calendar events and provisions Teams meetings, and a shared cache keyed by normalized query keeps a quota-limited job-search API within 1,000 calls per month.

~ github.com/diegojrobles/OffrPlus

AI Doctor: Cross-Platform AI Healthcare App. Symptom assessment, emergency detection, and provider suggestions in a React Native app backed by Llama 3.3 through a Dockerized FastAPI service. Layered safety controls (guardrails, JSON-schema validation) gate every model response. Presented the architecture at Google DevFest to 200+ developers and industry mentors.

AI-Server: Multi-Provider LLM API Server. Built an LLM gateway in FastAPI that fronts OpenAI, Anthropic, and Google behind one REST interface. Handles async requests with token streaming, Pydantic validation, per-client rate limiting, and structured error handling.

Email Database. An in-memory user-record database written in C, using pointers, manual memory management, and custom data structures.
