DIEGO J. ROBLES COSTA

Tampa, FL | +1 (603) 974-3262 | djrobles444@gmail.com
diegojrobles.com | github.com/diegojrobles | linkedin.com/in/diegojrobles44

EDUCATION

University of South Florida, B.S. Computer Science *Tampa, FL | Expected May 2028*
Coursework: Data Structures, Computer Organization
Certifications: C++ Programming Fundamentals (Microsoft), Google AI Essentials (Google)

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C, C++, C#, HTML/CSS
Backend and Systems: PostgreSQL, row-level security, REST API design, FastAPI, Flask, serverless functions, OAuth 2.0, caching and quota control, API key authentication, rate limiting, Docker, GitHub Actions, pytest, Node.js
AI: LLM integration, transformer model serving (DistilBERT via Hugging Face), vector stores and retrieval (Chroma), prompt engineering
Tools and Systems: Git, Linux and CLI, React, React Native, Microsoft Graph API, Azure and Entra ID, Windows Server, Active Directory, AWS (EC2, SSM)

EXPERIENCE

IT Intern, WS Development *Boston, MA | Jul 2026 to Aug 2026*
- Administered 511 user identities across Windows Server, on-premises **Active Directory**, and **Azure/Entra ID** hybrid environments spanning 100+ properties and 400+ tenant companies.
- Scripted Group Policy deployment of Claude Co-Work to 500+ employees across Active Directory, and helped build a Claude Skills library distributed through SharePoint.
- Remediated 193 NinjaOne-flagged vulnerabilities across corporate and property-site infrastructure, working from a queue of roughly 200 weekly tickets.

Cooperative Internship, Python and Database Development, GCA *Tampa, FL | Aug 2026 to Present*
- Drove a **SQL** sustainability analysis for **Intel**, joining device and impact data, engineering age cohorts, and segmenting by device type and region to quantify energy and CO_2 savings that guided repurposing initiatives.
- Analyzed the **GameJet** user funnel and monetization across joined datasets, building spend personas with CASE logic and modeling time to first purchase to surface conversion gaps and revenue drivers for growth experiments.
- Queried **Transport for London** ridership, **Crunchbase** startup funding, construction and weather, and retail order datasets with joins, subqueries, aggregation, and ranking to find peak travel times, weather-driven demand surges, and high-potential startups.

AI/ML and Cybersecurity Mentorship, Google Developer Group *Tampa, FL | Aug 2025 to Nov 2025*
- Selected as **1 of 20** students for a mentorship program building a healthcare application in Python under weekly mentor code review, and continued contributing to the codebase after the program ended.

PROJECTS

Offr+, Recruiting Platform for Finance Students *React, TypeScript, Supabase, PostgreSQL*
- Built the codebase: 11 pages, 13 Postgres tables, and 3 serverless edge functions. Isolated tenants with 39 **row-level security** policies so no session can reach another user's data.
- Kept OAuth refresh tokens and API secrets server side in edge functions, rotating them on refresh, and integrated **Microsoft Graph** to sync calendar events and provision Teams meetings.
- Held a quota-limited job API under its 1,000 calls per month free tier with a shared 12-hour cache keyed by normalized query, so repeated searches across all users serve from one call.
- Built resume upload with client-side text extraction from PDF and .docx into per-user private storage buckets.

AI-Server, Model Inference REST API *Python, Flask, Docker, GitHub Actions, pytest*
- Built a Flask API serving a **DistilBERT** sentiment model behind API key authentication and per-client rate limiting, with health, predict, and model-listing endpoints and environment-based model selection.
- Moved model loading from import time to first use after the import chain began downloading a model, which made the test suite impossible to run offline. Added a handler injection seam so tests substitute a fake, deferred the transformers import, and kept **/health** reporting readiness without forcing a load.
- Wrote an offline pytest suite and a three-job **GitHub Actions** pipeline: tests with coverage on Python 3.11 and 3.12, ruff lint and format checks, and a security job scanning full commit history for leaked secrets and auditing dependencies for known CVEs.

AI Doctor, Healthcare Chat Application *Python, FastAPI, Chroma, Docker, AWS*
- Contributed backend and infrastructure work to a four-person mentorship team and kept contributing after the program ended, including fixing an auth middleware bypass that had left every endpoint **unauthenticated**.
- Added rate limiting to public endpoints, enforced a clinician-only role, moved deployment secrets to AWS SSM, and built the AWS deployment stack and container entrypoint.
- Wrote the medical corpus loader and the retrieval evaluation harness for the **Chroma** vector store backing the system's retrieval, and presented the architecture at **Google DevFest**.

Email Database, In-Memory Record Store *C*
- First project. Built a REPL-driven record store in C with a hand-written statement parser, fixed-layout row serialization, insert and select execution, and manual memory teardown.

LEADERSHIP

Society of Hispanic Professional Engineers (SHPE) | *Hackabull Outreach Director* *Tampa, FL | Sep 2026 to Present*
- Selected to the chapter director board to lead corporate sponsorship outreach for **Hackabull**, USF's annual student hackathon, owning the sponsor pipeline from first contact through agreement and event logistics.
